EDRS PRICE	Document Not Available From EDRS.
DESCRIPTORS	Case Studies; *Conference Proceedings; Information Processing; Information Retrieval; *Information Science; Information Seeking; Information Technology; *Library Research; *Library Science; User Needs (Information); World Wide Web

ABSTRACT

These proceedings are the fourth in the series of international conferences whose general aim is to provide a broad forum for critically exploring and analyzing library and information science as a discipline and as a field of research from historical, theoretical, philosophical, and empirical perspectives. The papers in this volume cover a wide variety of topics, presenting the latest research and discourse on developments and new approaches to frameworks and methods in library and information science. Papers range from a re-examination of the core concepts to empirical studies, analyzing such areas as Web searching, information retrieval, informetrics, information behavior, aspects of learning, and information processing mechanisms. As library and information science is closely associated with a variety of other disciplines and its practice employs technologies that are changing rapidly, presenters focus on the old and the new, address theory and practice, and bridge diverse intellectual areas, leading the way to change and further exploration.
